

TEMITOPE OLUWASEUN ADEGBEYENI

AI & Machine Learning Engineer

07881154101 • oluwa.seun4516@gmail.com • [LinkedIn](#) • [GitHub](#)

PROFESSIONAL SUMMARY

AI/ML Engineer with 4+ years of combined industry and research experience, holding an MSc in Artificial Intelligence (Distinction) from the University of Salford and a BSc in Computer Engineering. Proven track record delivering production-grade ML pipelines, LLM-powered applications, and MLOps infrastructure on AWS and Azure. Hands-on expertise in deep learning, NLP, RAG architectures, and LLM fine-tuning. A fast learner who thrives in cross-functional teams and is eager to drive measurable business impact through scalable AI solutions.

CORE SKILLS

Languages	Python, SQL, JavaScript (ES6+), TypeScript
ML / DL	PyTorch, TensorFlow/Keras, scikit-learn, YOLOv8, CNNs, Vision Transformers
LLMs & GenAI	OpenAI API, LLaMA, BERT, Hugging Face Transformers, RAG, Prompt Engineering, LLM Fine-tuning
NLP	spaCy, NLTK, Rasa, Hugging Face, Streamlit
MLOps	MLflow, DVC, GitHub Actions, CI/CD, Docker, Flask API
Cloud	AWS (Bedrock, SageMaker), Azure (OpenAI, ML Studio, AutoML), GCP
Monitoring	Grafana, Model Drift Detection, Experiment Tracking, PostgreSQL
Tools	Databricks, Microsoft Copilot, OpenAI APIs, Ludwig, MySQL

WORK EXPERIENCE

Data Scientist Waftsoft Consulting Remote	Oct 2025 - Present
- Built prompt-engineered classification pipelines using LangChain and LLaMA 3.1 to categorise 1,000+ free-text survey responses, reducing manual coding effort by 60% and surfacing richer qualitative insight. - Conducted large-scale resident survey analysis (2,000+ responses, 300+ variables) using LightGBM and stepwise regression to identify key drivers of satisfaction and public trust, drawing on insurance risk modelling methodology for audience segmentation. - Led a team to develop an AI-powered customer service chatbot using LangChain and NLP, trained on over 100,000 customer queries; the system automated 73% of inbound support requests while incorporating content filtering and fairness protocols to ensure safe, unbiased outputs. - Engineered end-to-end data pipelines in Python to clean, transform, and prepare multi-source datasets for modelling, reducing data preparation time and improving downstream model reliability across client projects. - Developed interactive dashboards and data visualisations to communicate model outputs and statistical findings to non-technical stakeholders, enabling evidence-based decision-making at the client level. - Applied feature engineering and dimensionality reduction techniques to high-dimensional datasets, improving model interpretability and predictive performance across multiple client engagements.	
AI Researcher University of Salford Manchester, UK	Apr 2025 - Sept 2025
- Designed and trained a multilingual conversational AI system using Hugging Face Transformers and Rasa, integrating entity recognition, intent classification, and fallback handling to deliver robust real-time NLP responses via a REST API. - Benchmarked CNN architectures (MobileNet, Inception) and Vision Transformers for early melanoma detection on the ISIC dermatoscopic dataset, evaluating models across AUC-ROC, F1-score, and accuracy; findings informed clinical relevance assessments and cloud-based AutoML comparisons. - Developed an end-to-end ML pipeline in Azure ML Studio for predicting student dropout risk using KNN and decision tree classifiers, achieving over 85% accuracy with MLflow experiment tracking and data drift monitoring integrated throughout.	

- Trained a custom YOLOv8 object detection model on a manually annotated video dataset for real-time human fall detection, deploying the model as a Flask microservice optimised for low-latency inference and future edge deployment.
- Conducted research across deep learning, NLP, and big data techniques, synthesising findings into technical reports reviewed by academic supervisors; awarded MSc with Distinction.

AI Engineer | [Slink Digital Technologies](#) | Ogun State, Nigeria

Nov 2021 - Aug 2024

- Led end-to-end ML pipeline development using Azure ML Studio and MLflow, reducing model deployment turnaround by standardising experiment tracking, versioning, and redeployment workflows.
- Implemented CI/CD pipelines with GitHub Actions to automate model retraining and redeployment, cutting manual release effort and improving delivery consistency.
- Deployed production monitoring dashboards (Grafana + PostgreSQL) with automated alerts for model drift, latency spikes, and accuracy degradation, enabling proactive model maintenance.
- Conducted sentiment analysis on customer support interactions using NLTK, delivering actionable insights that informed product and service improvements for client teams.
- Built and maintained versioned ML projects with DVC for data and model version control, and MLflow for reproducible experiment tracking.
- Evaluated and optimised existing AI models for performance, fairness, and interpretability; maintained production models with robust retraining strategies on cloud infrastructure.

Software Developer | [Cryptheg Technologies](#) | Lagos, Nigeria

Feb 2020 - Nov 2021

- Built a modular, responsive web application with ReactJS, CSS3, and Hooks; UI improvements drove a 20% increase in web traffic.
- Collaborated with Product Design to deliver pixel-perfect interfaces, and mentored junior engineers on team technologies and best practices.

Frontend Developer | [FPG Technologies](#) | Lagos, Nigeria

May 2019 - Jan 2020

- Developed features for social media, banking, and hospital management applications using ReactJS and TypeScript, applying UI/UX, SEO, and performance best practices.
- Built an automated issue-notification system that improved user-issue response time by 70%; worked in an Agile team with Gitlab-tracked sprints and code reviews.

EDUCATION

University of Salford | Manchester, UK

Sept 2024 - Aug 2025

MSc Artificial Intelligence - Grade: Distinction

Relevant Modules: Deep Learning, Machine Learning & Data Mining, Big Data Tools & Techniques, Natural Language Processing

University of Lagos | Lagos, Nigeria

Jan 2016 - Sept 2021

BSc Computer Engineering (Minor: Electrical & Electronics Engineering) - CGPA: 3.75/5.00

Relevant Modules: Object-Oriented Programming, Data Structures, Software Engineering Fundamentals
